

REFLEXOLOGY FOR INFERTILITY

There can be a number of reasons why a person is unable to be pregnant. In one third of cases the cause is found with the man, in one third with the woman and in one third both are part of the problem.

Some of the cause can be:-

- **Hormonal Disorder**
- **Over reactive immune system**
- **Defect in Fallopian tubes/Vans deferens**
- **Infections affecting the sexual organs of male and female**
- **Musculo-skeletal tensions in the pelvic area**
- **Stress**

The deep relaxation experienced during Reflexology treatment alleviates stress and tension and clears emotional blocks so that conception may take place.
